

STEP-BY-STEP FOR A PERFECT FILLING

Following these steps guarantees the maximum performance of Sepicat clumping litter and easier cleaning.

Ideal depth
5–7 cm

1

**CLEAN AND DRY
THE LITTER BOX
COMPLETELY.**

Be sure to remove all residues and leave it ready to receive the litter.

2

**POUR THE LITTER
UNTIL REACHING A
DEPTH OF
5 TO 7 CM.**

Completely cover the bottom without exceeding the recommended measurement.

3

**DISTRIBUTE IT
UNIFORMLY OVER
THE ENTIRE
SURFACE.**

A leveled surface ensures better clumps and facilitates daily cleaning.

4

**PERIODICALLY
CHECK THE LEVEL
AND REFILL ONLY
WHAT IS REMOVED.**

Always maintain the ideal depth for optimal performance.

The depth of 5 to 7 cm allows liquids to be absorbed and form firm clumps without reaching the bottom, preventing residues and bad odors.

A well-prepared litter box is a synonym for well-being for your cat and for you.
